

TO 220 Leadbend Options

National Semiconductor offers several types of enhanced packages. One with high popularity is the TO-220 package designed with exposed heat sink for efficient heat dissipation. Examples of some products used in this package are voltage regulators, comparators, and high current switches. The TO-220 package is offered in lead counts from 3 to 15. To provide flexibility on system board applications, several leadbend options are offered as shown.

For any TO-220 package, please check with your sales representative for availability of requested leadbend options.

Note:

- Surface Mount Leadform available as TO-263 package.

- National Semiconductor's leadbend process requires an accurate set up and tight tooling controls. Third party leadbends are not recommended nor guaranteed, as an incorrect set up can potentially damage the device and render the device non-functional. For special lead forming or bending requirements please contact your National sales or marketing person.
- The maximum recommended torque force to mount a TO-220 package to a heatsink or PCB board is 9 inch-pounds. Use of rivet or exceeding torque force can potentially damage the device and render it non-functional and is not recommended nor guaranteed.
